

HYDRAULIC MULCH

PROTECTS EXPOSED SOIL AND ESTABLISHES VEGETATION

Hydraulic mulch is a fast, efficient seeding method that combines seeds, water, fiber mulch and tackifier into a slurry. The slurry is then evenly sprayed onto the ground.

This method is ideal for a variety of hydroseeding applications such as golf courses, highway work, landfills, reclamation projects, recreational areas and hard-to-access areas.

We offer a variety of hydraulic mulches to ensure customers get the products best suited for their specific application.

Hydraulic mulch is available in the following blends:

- Paper
- Wood
- Paper and wood
- Straw

In addition to these blends, customers can incorporate other soil amendments, like tackifiers, into their mulch.

Hydraulically applied mulch products may include:

- Straw
- Cellulose fiber mulch
- Wood fiber mulch
- Wood fiber blend mulch
- Easy Mix premium mulch for jet machines
- Bonded fiber matrix
- High-performance flexible growth media
- Biotic soil media

ADVANTAGES

- Increases moisture retention
- Fast and efficient application
- Promotes vegetation
- Prevents soil erosion
- Reaches areas that are difficult to access
