

SILT FENCE

TEMPORARY SEDIMENT CONTROL THAT IS RELIABLE AND COST EFFICIENT

We offer a comprehensive selection of high-quality silt-fence products for temporary sediment control on construction sites. This offering includes commercial and DOT silt fences, custom-designed and printed silt fences and Super Silt Fence posts.

SILT FENCE WITH WIRE BACKING

Our heavy-duty wire-backed silt fence handles higher volumes of runoff and traps more sediment and debris. This silt fence is woven with polypropylene material, is non-biodegradable and resists ultraviolet degradation.

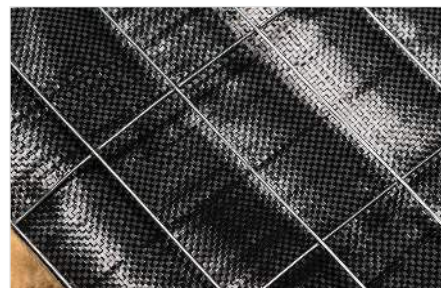

SUPER SILT FENCE

This sediment containment protection and perimeter control solution is woven with polypropylene fibers that have been treated to resist degradation caused by sunlight and common soil chemicals. As a result, these silt fences are a long-lasting solution.

Super Silt Fence is available in many commercial and DOT styles.

PRINTED SILT FENCE

We also offer custom-printed silt fences, giving customers a creative opportunity for promoting their brand. These fences feature a variety of color and size options for further customization. UV-resistant and durable, these fences are made to make a lasting impression.
