

LOT 125

Product Technical Data Sheet

LOT 125 is a biologically enhanced product that aids in the conversion of fertilizer to complex plant nutrients, helps buffer salts, and augments micronutrient availability. It promotes soil aeration and water penetration of soil particles thereby reducing runoff. Nutrients are stabilized in the rhizosphere where they remain available over a longer period of time. Lot 125 contains humic substances which greatly enhance the photosynthetic rate of the plant. Lot 125, when mixed with other fertilizers, enhances nutrient uptake. OMRI listed (by BioFlora System's) products Humega and Fulvex are combined to produce this finished product.

Derivation: Humic and fluvic acids are derived from leonardite.

Density: 8.7 lb per gallon

Application: Lot 125 can be used on all crops. General side dress or water run 10-40 gallons per acre. Mix with a minimum of 20 gallons of water per acre. Rate can vary by crop. Product can also be used through drip or pivot.

Compatibility: To ensure ease of mixing and application, dilute with sufficient amounts of water. Jar test new mixes. Do not mix with soil fumigants, aqua-ammonia, sulfuric acid, urea, sulfur, or calcium based products.

Storage & Handling: Store in original container in a cold, dry place out of direct sunlight. In case of accidental exposure, flush with water. Product is non-hazardous. May stain clothing. Wear eye protection when handling material.

Keep away from children. Not for human or animal consumption. Buyer assumes all risk of use, handling, and storage of material.

Information regarding the contents and levels of metals in this product is available on the web at <http://www.aapfco.org/metals.htm>

DO NOT ALLOW PRODUCT TO FREEZE.
