

The World's Most Advanced Engineered Soil Medium

Loaded with a Patented Biological Soil Nutrient System

ProGanics™ Biotic Soil Media™ (BSM™) is hydraulically applied for fast application and contains a patented, highly-concentrated biological soil nutrient system. This system makes nutrient uptake by plants more efficient, and initiates the nutrient cycling required to build and replenish healthy soil for sustainable vegetation. ProGanics also

supplies critical organic materials, endomycorrhizae, seaweed extract, humic acid, biochar and other soil-building components for "life insurance" on even the most inhospitable sites. If the soil on your next project contains less than 5% organic matter, you need ProGanics to ensure your success.

Hydraulically applying ProGanics is more cost-effective than typical topsoil or compost applications, and it overcomes soil deficiencies better than alternative Biotic Soil Amendments.

Follow Profile's 5 Fundamentals on your next project, starting with a **FREE soil test**. You'll see exactly what you're lacking, and how ProGanics BSM, used in conjunction with ProPlus® Prescriptive Solutions, can lay the foundation you need for success.
