

Boone County Transmission Line

Boone County WV

Featured Product(s):

Profile Products ProGanics and BioPrime

Product Advantages:

- ProGanics Biotic Soil Media provides the organic matter needed to generate “topsoil” from the soils onsite.
- BioPrime, slow release 18-0-0 fertilizer, mixed with seaweed extract, humic acid, and endo mycorrhizae. This combination increases root mass and cell structure to optimize delivery of macro & micro-nutrients.

The Challenge

Slopes along an access road for construction of a new Power Transmission line in Boone County WV were not establishing vegetation by traditional means.

A soil test run through the Ferguson Geo & Stormwater Solutions group indicated the need for nutrients and organic matter be added to the soil.

The Solution

Ferguson provided ProGanics B.S.M and BioPrime to be added to the Hydro-seeding mix. Results 1 month later shown above.
